

Sloping Vertical Drapes

The **Sloping Vertical Drape** is the stylish answer to your needs if you have a sloping window.

Whether you need effective light control, privacy or decorator style, the **Sloping Vertical Drape** has it all.

You have creative flexibility with a wide choice of colours and fabrics. You can block out most of the light with "blackout" fabrics or use translucent fabrics to give a soft filtered light.

Dust falls off **Vertical Drapes**.

Elegant options allow you the most effective control of light.

Choose from Standard Chain and Cord operation or full electric control over tilt and stack. Electric control is only available from Aviance Blinds or its agents.

Standard chained weights control the drape of the fabric or, optional "chainless weights".

Sloping Vertical Drapes are fully functional, with built in cordlock so you can stop the blind at any position easily.

The maximum slope at which Aviance Sloping Vertical drapes are able to be rotated is 55 degrees.

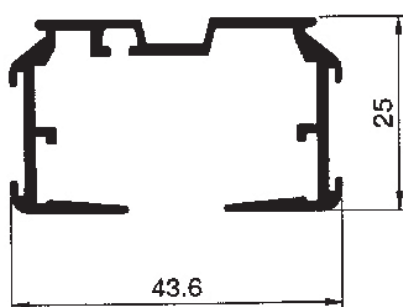

In all instances there will be a triangle at the top of each vane that is open. The size of this triangle is determined by the vane width and by the slope of the blind.

Choose from a range of track colours and an optional fabric strip to match the vanes.

The maximum length of the track extrusion is 6000mm.
