

Thermalite Plantation Shutter

Thermalite Shutters are the best synthetic shutters available - they look and feel exactly like wood, but have some qualities that far surpass those of wood.

Made from dense, polymer foam, **Thermalite** is a solid, non-toxic, synthetic material. Because **Thermalite** is 100% synthetic, no natural resources are destroyed in the manufacturing process. Additionally **Thermalite** is water resistant, fire retardant, and insulates more than two times greater than wood.

Thermalite Shutters can be installed in adverse environments where wood shutters cant—bathrooms, showers and over the kitchen sink. If you forget to close the window during a rainstorm they will not be damaged. They can even be installed externally.

Thermalite's manufacturing process includes the patented duraglide louvre tension system, guaranteed never to need tightening or adjusting. The clearview control system means that no tilt rods are visible..
